2023

Local Westland FBM Crop Summary

Rented Land

Crop	Average	Production	Production Costs
	Yield	Costs	less gov't payment
Corn.....	189.58 bu.....	\$4.87.....	\$4.37
Soybeans.....	44.19 bu.....	\$11.73.....	\$11.53
Wheat.....	51.05 bu.....	\$11.18.....	\$10.73

Owned Land

Crop	Average	Production	Production Costs
	Yield	Costs	less gov't payment
Corn.....	194.77 bu.....	\$4.24.....	\$4.05
Soybeans.....	47.09 bu.....	\$9.12.....	\$8.66
Wheat.....	47.16 bu.....	\$11.77.....	\$9.84

Observations from 2023 Westland FBM Annual Report and 2024 Cashflows:

Overall thoughts on 2023:

1. 2023 was a year that was for a majority of the year very dry. The spring was late after a very long snowy winter. Then the rain stopped and most producers had very little rain until late July.
2. Prices for commodities deteriorated throughout the year. The high for corn and soybeans was set early in January.
3. With the weather being dry and prices deteriorating, not many new crop bushels were priced prior to harvest.
4. Even though the spring was late and the summer was dry, yields for the most part were very good. Much better than anyone anticipated. The hot dry summer had enough growing degree units to push the crop to full maturity by harvest.
5. There were areas however that were not as fortunate to get the late season rain or they came too late. Yields were very spotty.
6. Corn prices deteriorated as the outstanding yields in 2022 provided a large carryover. South America also had a large crop.
7. Soybean prices also deteriorated as a large 2022 and South American crop provided a big supply.
8. Interest rates continued to rise. Since March of 2022, there have been 11 rate increases by the Federal Reserve.
9. Inputs continued their climb up in price. Repairs were driven by inflation & lack of availability.
10. Fertilizer prices cooled off however, most of the fertilizer for the 2023 crop was purchased in late 2022 or early 2023 when prices were high.
11. Labor continues to be hard to find and the cost continues to go up.
12. Machinery availability increased. However, prices stayed very firm as the income levels from 2022 fueled the market.
13. Land sales in the area topped \$10,000/acre or more. Sales were strong as producers used excess working capital to expand their operations. Demand does not seem to letting up.

Referring to Net Comparison's page in the Westland Summary Book

1. Gross Farm Income is the highest level (\$689,205) recorded. Topped last year (2022).
2. Cash Operating Expenses also at the highest level (\$551,172) recorded for the group.
3. Net Cash Farm Income is at the highest level (\$140,934) since 2013.
 - a. This is the cash available to pay family living, taxes, and make principle payments in the year.
 - b. \$18,564 from government payment mostly Emergency Relief Program (ERP from prior years), CSP, and payments from Emergency Grain Storage Facility Assistance Program (EGSFP)
4. Inventory change was down from 2022.
 - a. Accrual loss from grain decreasing in price from Jan 2022 to Dec 2023.
 - b. Grain being held back from being sold for tax purposes and 2023 crop unsold.
 - c. Negative inventory change for the first time since 2017.
 - d. Withdrawl from inventory kept farm income high but, meant that farmers were not replacing the inventory as it was withdrawn.

- e. The inventory change is a result of lower commodity prices (ie. \$6.00 corn on inventory was replaced with \$4.00 corn)
 - f. Farmers were not feeling their financial base eroding out from underneath them. By the end of the year, I think most farms could feel the effects.
5. Net operating profit (Net cash Income + Inventory change) \$135,792. Down from 2022
- a. Down 36% from 2023.
 - b. Down from 2023 as the squeeze on profits from high input prices and lower commodity prices.
 - c. Working capital is still at high levels but, has come off the highs of 2021 & 2022.
 - d. Lowest net operating profit since 2019.
6. Land Rent both the median and average cost per acre was up.
- a. Average was \$244.91 up from \$22.38 in 2022.
 - b. Median was \$184.83 up from \$180.63 in 2022.
 - c. Median is the middle of all the reported cost per acre (listed)
 - d. Average can be skewed by acres at too high or low compared to the majority of producers.
7. Net Worth change was down from 2022. \$189,679 to \$119,301 in 2023.
- a. Down 38% from 2022. Down 59% since 2021.
 - b. Mostly due to decreased commodity prices and increased input expenses.
8. Term debt coverage (1.99). Down from 2021 & 2022 but still excellent.
- a. Term debt coverage is the ability of the business to repay debt.
 - b. Must be above 1.0.
 - c. Down because of decreased profitability, increased expenses including interest and producers added debt as they purchased machinery and land.
9. Family living was up (\$67,558) for a median family of 3.
- a. Family Living was up as inflation hit the general economy and interest rates increased.
10. Average age of the producer in the Westland Farm Business Management Group is 46 and been farming for 23 years. We added a few younger farmers to the group.

Corn an Owned and Rented Land Reports:

1. Average yield of corn was 189.58. Across rented and owned land.
 - a. Wide variety in yields (239 bpa to 144 bpa). All depended on rainfall received.
 - b. Yields were as spotty as the rain.
 - c. Production was over the 5 and 10 year average. Amazing for the lack of rain during the year. Speaks to the genetics that have been developed.
 - d. Emergence wasn't great as the spring was late and some didn't emerge until a late rain. The heat units over the hot dry summer caught the crop up.
2. Net return on rented ground was \$24.33/acre. Down from \$260.02/acre last year.
 - a. \$4.51 was the average price received. Unpriced bushels were put on the balance sheet at \$4.50/bushel at the end of the year. Priced bushels were put on the balance sheet at the price they were contracted for.
 - b. Price decrease from 1/1/23 to 1/1/24 was \$2.15/bu. (\$6.66 to \$4.50)

- c. Huge number of unpriced bushels at the end of 2023. Market was falling and there was concern about crop during the dry summer.
- d. Overall corn expenses (\$898.07/acre) were almost exactly what they were for 2022 (\$896.83). Yet gross dollars per acre were down \$239/acre.
- e. Fertilizer was actually \$5.00 more than for 2022 crop. Most of the fertilizer was purchased as prepay or shortly after 1/1/23.

Soybeans on Owned and Rented Land

- 1. Yields were 1 bushel less than 2022 (44.14 bpa).
 - a. Below the 5 & 10 year average.
 - b. Yield was down from late spring and dry summer. Also increased issues with cyst and other diseases.
- 2. Net return per acre on rented was down \$82.71/acre compared to 2022.
 - a. Net return was \$43.61 below the 10 year average.
 - b. Net Return rose above the net return per acre of corn. This was the first time the net return was above the net return for corn since 2018.
 - c. Most soybeans were sold out of the field while corn was put in the bin. More bushels of soybeans were stored however as the draught kept farmers from marketing.
 - d. Soybeans still on hand at the end of the year and not contracted were priced at \$12.00/bushel.
 - e. Average price received by the producers ranged from \$13.50 to \$11.00/bushel.
 - f. The Chinese economy dipped and South America became more competitive on the world market as the American dollar rose in value. Draught also hampered exports on the Mississippi River and Panama canal.
- 3. Cost for raising soybeans has increased up to \$520.36/acre.
 - a. Cost has risen \$108.76/acre since 2021.
 - b. Fertilizer costs were up \$19.00/acre from 2022.
 - c. Land Rent were up \$11.00/acre. (\$31/acre increase since 2021)
- 4. More interest in edible bean acres again this year. Profitability on edibles was good this past year. There are some issues with over supply .

Wheat on Owned and Rented land

- 1. Wheat yield was very spotty. Range was 106 bpa to 26 bpa.
 - a. Wheat yield of 51.05 bpa was down from 58.14 bpa in 2022.
 - b. The wet late spring and planting the wheat late was a major factor in less yield. Along with the dry summer.
 - c. Price was down \$1.96 per bushel from 2022.
- 2. Lack of profitability has eroded the number of acres among the group over the years.
- 3. Net return of -\$129.41/acre was as low as I could find.
 - a. Net return was down \$162.61/acre from 2022.
- 4. Expenses were up for growing wheat from 2022/acre. Up \$41.41/acre
- 5. Wheat got caught with high fertilizer expense and decreasing commodity price. Not a good combination.

6. Wheat return per acre was well below return for corn and soybeans.

Sugarbeets Owned and Rented

1. The one shining commodity where profits were up considerably from 2022.
2. The crop was one of the better ones for tonnage and prices were up!
3. The sugarbeet crop for our producers was 9.83 ton more than it was in 2022.
4. Price for the Sugar was up \$17/ton compared to 2022.
5. Net income was up \$863/acre compared to 2022.
6. Cost of growing the sugarbeets was down \$74.40/acre from 2022.
7. Share price has risen. There is renewed interest in growing sugarbeets as the MNDAK plant seems to be running efficiently and profitably. The decrease in profit in corn and soybeans also is fueling renewed interest.
8. Sugarbeets are back to being the profit leader.

Finish Cattle

1. Cattle were more profitable than they have been the last 2 years.
2. Fat cattle have surged to new price levels but so have feeder cattle.
3. Feed costs are down. With lower prices for corn and proteins.
4. There were accrual profits in cattle this past year.
5. Cow/calf producers have not begun to retain heifers so, the higher prices should stick around.
6. The challenge now for feedlot producers is to keep their accrual profits and not to lose them once the supply of feeders gets plentiful and margins deteriorate.

Overall Thoughts going into 2024

1. 2023 was the year profits came crashing back to earth.
 - a. The commodity price decreases as well as a dry summer really took the bulls out of the market.
 - b. Fuel and fertilizer prices decreased but, not as fast as commodity prices.
2. The risk of high input costs finally came crashing down on producers.
 - a. Fertilizer being bought at the highs and little crop production being marketed when profits were available was a problem for profitability.
 - b. Decreases in expenses always lag behind price decreases. Fun on the way up, expensive on the way down without some price mitigation.
3. Increase in interest rates is something we knew was coming and now it is here.
 - a. Most producers will see there operating loans almost double from 4.5% to 8%
 - b. Most have locked in interest rates on intermediate and long-term debt.
4. Prices have dipped and have decreased the farther we go into 2024.
5. Uncertainty and volatility still are the name of the game.
 - a. New crop prices decreased into 2024 but, seem to have stabilized by late February 2024
 - b. There are still numerous old crop 2023 bushels unpriced. May be a disaster for July/August 2024.
6. Less profitability yet in 2024.
7. Cashflows for the 2024 growing season are difficult to be profitable at current price levels.
 - a. Inputs remain high and have yet to correct for the \$2.50/bu drop in corn prices.

- b. Fertilizer has dropped about \$50/acre but, little other expenses have dropped.
- 8. Some producers have a choice of using working capital or selling assets to make the cashflows work.
- 9. Inflation is still affecting the ag sector for parts and labor.
- 10. There is more machinery on dealer lots and it seems the shortage of new equipment has waned. However, the price of that machinery remains high.
- 11. Livestock producers and end users of the commodities are a big concern. Dairy and hogs had another tough year.
- 12. Cattle did become more profitable in 2024. Cheaper feed, continued demand for beef, and low inventories of feeder cattle all came together to make cattle profitable. Continues the trend of cattle being 2-3 years behind commodities in profitability.
- 13. Discipline continues to be a necessity in these times.
 - a. Costs must be controlled as much as possible.
 - b. Machinery purchases must be done strategically and within the cashflow
 - c. Purchases to strictly avoid taxes are the quickest ways to get yourself into trouble.
 - d. Remember to figure in the tax consequence for purchases that are not tax deductible (mostly land).
 - e. Working capital must be maintained!
 - f. We know from experience that this lack of profitability may last for awhile. After 2012 it was 7 years until profitability returned.
- 14. Marketing for the 2024 is difficult with prices for the most part below breakeven levels.
 - a. We may be in a position where the best that can be done is preserve working capital.
 - b. We know most of our costs for the 2024 crop. All that remains is the yield and price.
 - c. Locking in some is always a good idea as the inputs are purchased.
 - d. Selling a percentage of 2024 production is probably warranted when prices are close to breakeven levels.
- 15. Transitioning between generations is huge in the viability of the farm business.
 - a. If you're in your mid to late 50's or early 60's...time to get working on it!
 - b. If you're older than that, we are past due especially if there is another generation coming to farm.
 - c. I am happy to help you. I have worked with ways that have set the next generation well and some that have made it almost impossible for them to succeed.
 - d. It's a relief for everyone once it is done and in place.
 - e. Ignorance is not bliss for everyone!!
- 16. It is always my pleasure to work with all of you!
 - a. All of you do your best and a great job under the circumstances that you have.
 - b. We all have strengths and weaknesses. My job is to help you as much as I can to give you the tools to strengthen some of those weakness.
 - c. We cannot control everything and the best we can do is control the things that we can. We need to understand the difference and do the best we can.

16.Have a safe and Profitable 2024!
